

REMARKS

This Amendment is in response to the Official Action of July 26, 2004. In the Official Action the drawings were objected to under 37 CFR §1.83(a). It was stated that the drawings must show every feature of the invention specified in the claims. Therefore the upper and lower ends, lateral side, second step, first and second protrusions, must be shown or the features cancelled from the claims.

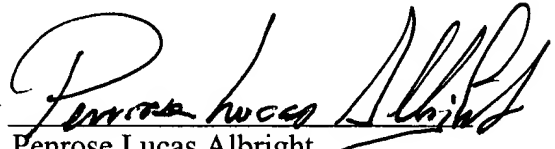

As previously indicated, formal drawings are being submitted herewith. In the Specification, the upper and lower ends and the lateral sides as well as the second step are clearly indicated.

Unless overlooked, the undersigned does not find any requirement or need that first and second protrusions be set forth, in such language, in the Specification. It will be noted that Claim 20 sets forth the first, second, third, fourth and fifth steps and does not include a sixth step. Concerning the objections to the Specification, it is submitted that the terminology in the Specification is quite clear and to make it more clear, the "steps" as such have been described with reference to the appropriate reference numerals assigned thereto. As long as the claims can be adequately defined in view of the Specification including the drawings, the use of differing terminology to describe various elements is immaterial and furthermore commonplace in U.S. patents.

Inasmuch as it is submitted that the Application, as amended, clearly avoids the prior art and the claims are definite, it is submitted that the Application is in form for allowance and action to such effect is respectfully requested.

Respectfully submitted,

MASON, MASON & ALBRIGHT
